

Modern trends in Industrial Electrical Drives System

Date- 09.01.2018

Venue- IEM Management House

In modern electrical engineering, electrical drives is one of the most happening things in the field of industrial applications, teaching, research, etc. The presentation started with a brief introduction on drives and their application in industry like Transportation, Paper Mill and Steel Plant etc. There was a small description about basic power electronic components and their operation principles and techniques. While going deep into the topic PWM techniques and its problems in offshore applications, active front end generation drive systems, Multilevel Inverter systems, Difficulty in filter designing in case of PWM system, and Space vector PWM technique have been discussed thoroughly.

Prof.(Dr.) Sujit Kumar Biswas giving lecture on “Modern Trends in Industrial Electrical Drives System.”
